**CERTIFICATE**

This is to certify that the Dissertation titled “**Processing, Characterization and Evolution of Epoxy and E-Glass Fibre Composite Filled with Zinc Sulphide for Automobile Body Panel Application**” that is being submitted by **PRABHAT KUMAR**, M.Tech (2013PPE5149) requirement for partial fulfillment of award of the degree of **Master of Technology, Production Engineering**, Malaviya National Institute of Technology Jaipur is found to be satisfactory and is hereby approved for submission.

Place: Jaipur

Date:

**Mr. Mukesh Kumar**

Asst. Professor Mechanical Engineering Department  
MNIT Jaipur

**MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY  
JAIPUR  
DEPARTMENT OF MECHANICAL ENGINEERING  
Jawahar Lal Nehru Marg, Jaipur-302017(Rajasthan)**

**CANDIDATE'S DECLARATION**

I hereby certify that following work which is being presented in the dissertation entitled **“Processing, Characterization and Evolution of Epoxy resin and E-Glass Fibre Composite Filled with Zinc Sulphide for Automobile Body Panel Application”** in the partial fulfillment of requirement for award of the degree of Master of technology (M.Tech.) and submitted in **Department of Mechanical Engineering** of Malaviya National Institute of Technology Jaipur is an authentic record of my own work carried out by me during a period from July 2014 to June 2015 under the supervision of **Mr. Mukesh Kumar**, Assistant Professor, Department of Mechanical Engineering, Malaviya National Institute of Technology Jaipur.

The matter presented in this dissertation embodies the result my own work and studies carried out and has not been submitted anywhere else.

Date:

**Prabhat Kumar**

**2013PPE5149**

## **ACKNOWLEDGEMENT**

It gives me immense pleasure to express my deep sense of gratitude and indebtedness to my supervisor **Mr. Mukesh Kumar** for his constant encouragement and guidance from inception to completion of this dissertation work by taking interest and giving personal attention to the same. His valuable feedback and moral support have been a great source of inspiration for broadening my horizons in this area of research.

I am grateful to **Professor G.S. Dangayach, H.O.D. Mechanical Engineering Department** for providing me a healthy and supportive environment for my research work.

I would like to extend my sincere thanks to **Dr. Amar Patnaik** for his invaluable support throughout the research work and **Professor Upender Pandel, HOD. Metallurgical & Material Engineering** for his help and cooperation.

I would also like to thank all Technical and Non-Technical Staff of the office of Mechanical Engineering department, MNIT Jaipur and Staff of Material Research Centre for their support.

I sincerely thank to my family members and friends for encouraging me and giving me support though all my works.

**Prabhat Kumar**

## ABSTRACT

Fibre reinforced Polymers (FRPs) are widely used in industries like automobiles, aerospace, marine and many others. They are preferred for their light weight, durability and design flexibility. Automobile body panels are also made of fibre glass, carbon fibres, or fibre-reinforced plastic. In some light commercial vehicles, these reinforced plastics may be used to ensure its potential benefits as per requirements. In the present work the polymer matrix composites (PMC) uses E-glass fibres as reinforcement and Epoxy resin as matrix component. The variation of properties of composites is studied under different fillers (particulates) contents, particulate being Zinc sulphide (ZnS) in this case. The present research work deals with the mechanical, thermal, thermo-mechanical and erosive wear behavior of E-glass fibre reinforced epoxy based composites and its properties variations with variation in the filler contents. The effect of filler content on mechanical properties like tensile strength, flexural strength, hardness and impact strength are investigated. The thermo gravimetric analysis is done to study the effect of thermal degradation of the polymer matrix composites. The dynamic mechanical analysis is also performed on the Visco-elastic materials to study Storage modulus, loss modulus and tan delta variations with temperature. Solid particle erosion behavior is provided in great details for glass fibre reinforced polymers. A robust design technique called Taguchi method is also used to determine the optimal condition for erosion wear rate by considering different parameters associated with it. The morphology of eroded surfaces is examined by using scanning electron microscopy (SEM) and possible erosion mechanisms are discussed.
