

LIST OF FIGURES

Figure No.	Figure detail	Page No.
Figure 1.1	Sources of electricity in India by Installed Capacity as of 2013	1
Figure 1.2	A inside view of hydro power plant	2
Figure 1.3	Various forms of surface modification technologies	8
Figure 3.1	High temperature vacuum casting machine and cast iron Mold	49
Figure 3.2	Thermal Vapor Deposition Machine	50
Figure 3.3	Micro-hardness Tester	52
Figure 3.4	Impact testing machine	53
Figure 3.5	Dynamic Mechanical Analyzer	54
Figure 3.6	Scratch Tester	55
Figure 3.7	Scanning electron microscopes (NOVA-500) along with EDAX	56
Figure 3.8	Atomic Force Microscope	57
Figure 3.9	Corrosion Tester	58
Figure 3.10	Slurry Jet Erosion Tester	59
Figure 4.1	Effect of reinforcement and coating on void content	66
Figure 4.2	Scratch test results for (a) single and (b) multilayer coating	66
Figure 4.3	Effect of reinforcement and coating on hardness	67
Figure 4.4	Effect of reinforcement and coating on flexural strength	69
Figure 4.5	Effect of reinforcement and coating on impact strength	70
Figure 4.6	Effect of reinforcement and coating on void content	72
Figure 4.7	Scratch test results for (a) single and (b) multilayer coating	73
Figure 4.8	Effect of reinforcement and coating on hardness	74
Figure 4.9	Effect of reinforcement and coating on flexural strength	76
Figure 4.10	Effect of reinforcement and coating on impact strength	77
Figure 5.1	Effect of reinforcement on stress intensity factor	80

Figure 5.2	Effect of reinforcement and coating on stress intensity factor (CrN coating)	81
Figure 5.3	Effect of reinforcement and coating on stress intensity factor (SiN/CrN coating)	82
Figure 5.4a	Variation of storage modulus with temperature for granite powder reinforced aluminium alloyed composites	83
Figure 5.4b	Variation of storage modulus with temperature for chromium nitride coating on granite powder reinforced aluminium alloyed composites	84
Figure 5.4c	Variation of storage modulus with temperature for silicon nitride/chromium nitride coating on granite powder reinforced aluminium alloyed composites	85
Figure 5.5a	Variation of loss modulus with temperature for granite powder reinforced aluminium alloyed composites	85
Figure 5.5b	Variation of loss modulus with temperature for chromium nitride coating on granite powder reinforced aluminium alloyed composites	86
Figure 5.5c	Variation of loss modulus with temperature for silicon nitride/chromium nitride coating on granite powder reinforced aluminium alloyed composites	87
Figure 5.6a	Variation of Tan Delta with temperature for granite powder reinforced aluminium alloyed composites	88
Figure 5.6b	Variation of Tan Delta with temperature for chromium nitride coating on granite powder reinforced aluminium alloyed composites	88
Figure 5.6c	Variation of Tan Delta with temperature for silicon nitride/chromium nitride coating on granite powder reinforced aluminium alloyed composites	89
Figure 5.7	Effect of reinforcement on stress intensity factor	90
Figure 5.8	Effect of reinforcement and coating on stress intensity factor (CrN coating)	91
Figure 5.9	Effect of reinforcement and coating on stress intensity factor	92

(SiN/CrN coating)

Figure 5.10a	Variation of storage modulus with temperature for granite powder reinforced aluminium alloyed composites	93
Figure 5.10b	Variation of storage modulus with temperature for chromium nitride coating on granite powder reinforced aluminium alloyed composites	94
Figure 5.10c	Variation of storage modulus with temperature for silicon nitride/chromium nitride coating on granite powder reinforced aluminium alloyed composites	95
Figure 5.11a	Variation of loss modulus with temperature for granite powder reinforced aluminium alloyed composites	95
Figure 5.11b	Variation of loss modulus with temperature for chromium nitride coating on granite powder reinforced aluminium alloyed composites	96
Figure 5.11c	Variation of loss modulus with temperature for silicon nitride/chromium nitride coating on granite powder reinforced aluminium alloyed composites	97
Figure 5.12a	Variation of Tan Delta with temperature for granite powder reinforced aluminium alloyed composites	97
Figure 5.12b	Variation of Tan Delta with temperature for chromium nitride coating on granite powder reinforced aluminium alloyed composites	98
Figure 5.12c	Variation of Tan Delta with temperature for silicon nitride/chromium nitride coating on granite powder reinforced aluminium alloyed composites	99
Figure 6.1	Variation in Erosion rate with impact velocity for uncoated, Chromium nitride coated, silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	101
Figure 6.2	Variation in Erosion rate with Slurry concentration for uncoated, Chromium nitride coated, silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	103

Figure 6.3	Variation in Erosion rate with Impingement angle for uncoated, Chromium nitride coated, silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	104
Figure 6.4a	Effect of control factors on the Erosion rate of granite filled aluminium alloyed composites	107
Figure 6.4b	Effect of control factors on the Erosion rate of Single layer coated granite filled aluminium alloyed composites	107
Figure 6.4c	Effect of control factors on the Erosion rate of multilayer coated granite filled aluminium alloyed composites	108
Figure 6.5	SEM image of uncoated, single layer coated, multilayer coated eroded sample	114
Figure 6.6	SEM image of uncoated, single layer coated, multilayer coated eroded sample	116
Figure 6.7	SEM image of uncoated, single layer coated, multilayer coated eroded sample	118
Figure 6.8	AFM image of plain and worn out surfaces for uncoated and coated granite particulate reinforced aluminum alloyed composites	123
Figure 6.9	Variation in corrosion rate with time for uncoated, Chromium nitride coated and silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	124
Figure 6.10	Variation in corrosion rate with pH for uncoated, Chromium nitride coated and silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	125
Figure 6.11	Variation in Erosion rate with impact velocity for uncoated, Chromium nitride coated, silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	127
Figure 6.12	Variation in Erosion rate with Slurry concentration for uncoated, Chromium nitride coated, silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	128

Figure 6.13	Variation in Erosion rate with Impingement angle for uncoated, Chromium nitride coated, silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	130
Figure 6.14a	Effect of control factors on the Erosion rate of granite filled aluminium alloyed composites	133
Figure 6.14b	Effect of control factors on the Erosion rate of Single layer coated granite filled aluminium alloyed composites	133
Figure 6.14c	Effect of control factors on the Erosion rate of multilayer coated granite filled aluminium alloyed composites	134
Figure 6.15	SEM image of uncoated, single layer coated, multilayer coated eroded sample	139
Figure 6.16	SEM image of uncoated, single layer coated, multilayer coated eroded sample	142
Figure 6.17	SEM image of uncoated, single layer coated, multilayer coated eroded sample	144
Figure 6.18	AFM image of plain and worn out surfaces for uncoated and coated granite reinforced aluminium alloyed composites	149
Figure 6.19	Variation in corrosion rate with time for uncoated, Chromium nitride coated and silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	150
Figure 6.20	Variation in corrosion rate with pH for uncoated, Chromium nitride coated and silicon nitride/chromium nitride coated granite dust reinforced aluminium alloyed composites	151
Figure 7.1	Flow chart used in the ENTROPY- VIKOR optimization technique	154
